Backend:

Ruby / Rails
Golang
Elixir / Phoenix
Crystal

Frontend:
React / Angular / Vue

DevOps:
Containers / ECS / Kubernetes
Gitlab CI / Github CI / Teamcity
Packer / Terraform

Languages

Spanish (native speaker)

English (Proficient speaker)

SPECIALIZATION

Over the past years, my focus has slowly but steadily shifted towards software development. Even when I studied about BI and Security.

Also I really like to work managing servers and containers, working to give the best CI/CD on the projects I'm envolved.

To end, I have experience with High concurrent applications, Improving applications and applyig techniquies to bring solutions to its highest capacities.

EXPERIENCE

Senior Software Engineer - Eng Lead | Synack
August 2022 - now

In 2022, I started working as Senior Software Engineer on Synack. After working closely with Synack by few years I decided to join this company to lead one of the engineering teams and challenge myself to lead engineering teams to achive the best possible products but doing it with high quality standards.

Senior Software Engineer - Eng Lead | Encora
February 2020 - July 2022

In 2020, I made the decison to move away from where I was really confortable to take a challenge, move to Encora to work on a big project with high quality standards and many talented coworkers. I'm taking this chance to improve a lot on back-end and front-end and to learn how to manage a long lived production platforms with a lot of concurrent users. In 2021 I was promoted as Senior Software Engineer and started leading engineering teams.

Software Engineer - Tech Lead | Tekton Labs
October 2018 - February 2020

On October 2018 I joined Tekton Labs. Amazing place to learn and to improve skills. I learned a lot from my coworkers and I participated on a lot of local projects but also remote with a plently of different technologies like basic frontends up to Blockchain. I also worked on a high concurrent platform for a in real time Q/A game, this was a big oportunity to learn how to profile and improve applications with dealing with big loads.

Developer | FullTimeForce
October 2018 - February 2020

On February 2018, I left my hometown to look for better opportunities on tech. It was a hard decision. I joined FullTimeForce as a Developer to work on US based project about managing restaurants. I guided the frontend work to develop shining tools and dashboards to take better decisons about business. I have a very good memories about all people there.

IT & Developer | Cesar Russel Contratistas SAC
January 2017 - December 2017

On 2017, I joined a building company, Cesar Russel was a great place to learn and understand how these businesses works internally and how using tech we can help them to manage the sources better and take better decision based on data. This was really helpful because it was my first time at this kind of small building company and it was an oportunity to help them improve using software.
